PROJECT NAME : SMART AGRICULTURE SYSTEM BASED ON IOT

DATE :15-06-2020

PROJECT OVERVIEW

SMART AGRICULTURE SYSTEM IS COMMERCIALLY SCALABLE METHOD WHICH IS BEING BUILT TO REDUCE THE EFFORTS OF FARMERES.THIS PROJECT WILL SOLVE THE MOST IMPORTANT PROBLEM THE FARMERS ARE FACING THAT IS WATERING THE CROPS AT RIGHT TIME AND ACCORDING TO THE REAL TIME FIELD CONDITIONS.

THERE ARE MANY THINGS TO TAKE CARE OF, WHILE WATERING OF CROPS.IF WE WATER THE CROPS TO MUCH, THE CROPS CAN GET DAMAGED DUE TOP WATER LOGGING.IF WE WATER THE CROPS ON A RAINY DAY ,THE EXTRA RAINWATER MAY TAMPER THE GROWTH OF CROPS.IF IN ANY CASE THE FARMER FORGET TO WETER THE CROPS FOR ONE DAY OR TWO BECAUSE OF ANY REASON,IT CAN AGAIN MAKE THE SOIL TWO DRY FOR THE PLANTS TO GET THEIR DAILY NUTRITION LEVEL.

CONSIDERING MANY FACTS ,THE PROJECT IS MAINLY FOCUSED ON AUTOMATING THE PROCESS OF WATER PUMP AND PROVIDING THE FARMERS WITH AN APPLICATION WHERE THEY CAN SEE THE STATUS OF THE PUMP,MOISTURE OF THE SOIL,HUMIDITY ,TEMPERATURE AS WELL AS WEATHER FORECASTING SO THE FARMER CAN MANY ARRANGEMENTS ACCORDINGLY.

THE ULTIMATE GOAL OF THE PROJECT IS TO INCREASE THE QUALITY OF YIELD BY TAKING CARE OF IRRIGATION PROCESS AND STARING THE REVOLUTIONARY ERA OF FARMERS BY BRINGING TECHNOLOGY INTO THE DOMAIN.

PROJECT SCOPE

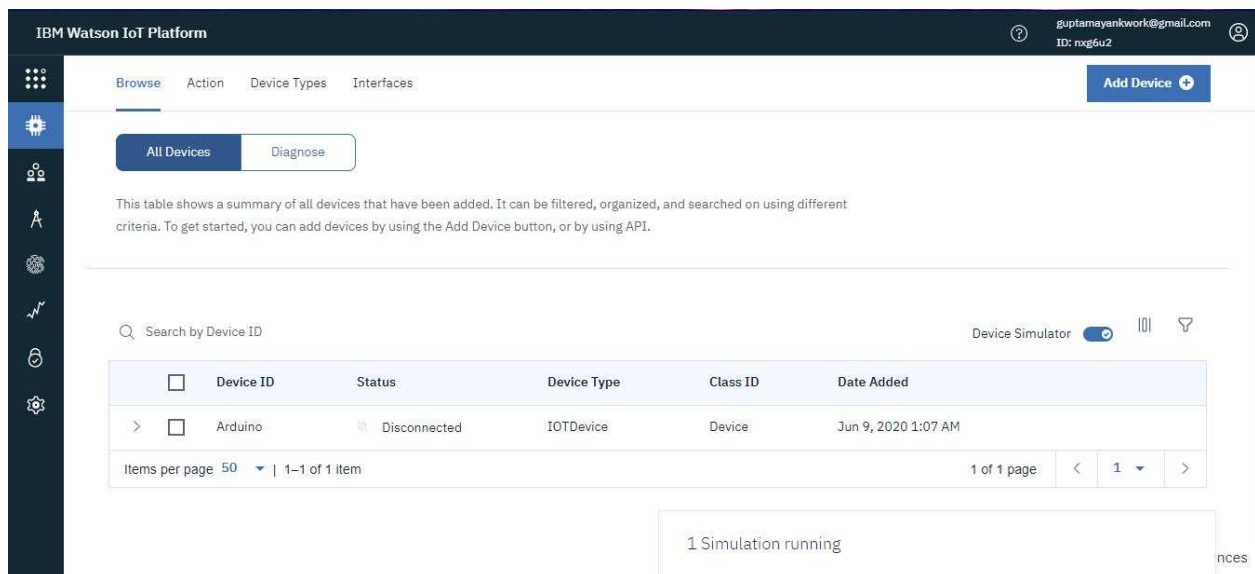

-WE ARE DEVELOPING AN UI FOR THE FARMERS TO HELP THEM CONTROL THE REAL FIELD PARAMETERS SUCH AS TEMPERATURE,HUMIDITY AND SOIL MOISTURE IN ORDER TO IRRIGATE THE FIELD ACCORDINGLY.

-THE UI IS BUILD USING NODE RED.

-THE IBM CLOUD IS USED TO STORE DATA FROM IBM WATSON IOT SIMULATOR WHICH IS KIND OF VIRTUAL SENSOR.

-THIS UI WILL HELP THE FARMERS CONTROL THE IRRIGATION ACCORDING TO THE FIELD PARAMETERS AND THEY CAN DO SO FROM ANYWHERE.

USE OF IBM WATSON

The screenshot displays the IBM Watson IoT Platform interface. At the top, the header shows the platform name, a user profile with email 'guptamayankwork@gmail.com' and ID 'nxg6u2', and a navigation bar with 'Browse', 'Action', 'Device Types', and 'Interfaces'. A sidebar on the left contains various icons. The main content area has tabs for 'All Devices' and 'Diagnose'. Below the tabs, a message states: 'This table shows a summary of all devices that have been added. It can be filtered, organized, and searched on using different criteria. To get started, you can add devices by using the Add Device button, or by using API.' A search bar labeled 'Search by Device ID' is present. To the right, there is a 'Device Simulator' toggle switch and a filter icon. The table below lists devices with columns: Device ID, Status, Device Type, Class ID, and Date Added. One device is listed: 'Arduino' with status 'Disconnected', type 'IOTDevice', class 'Device', and date 'Jun 9, 2020 1:07 AM'. At the bottom, there is a pagination bar showing 'Items per page 50' and '1-1 of 1 item'. A status box at the bottom right indicates '1 Simulation running'.

1 Simulation running

HERE WE HAVE ALL WORKING COMPONENTS SUCH AS THE IOT SENSOR.THE DEVICE WHICH CONNECTS TO THE SENSOR AND UPLOADS DATA INTO THE IBM CLOUD.THE MOTOR WHICH TAKES INPUT FROM THE WEB APP AND THEN UPLOADS INPUT VIA PYTHON CODE ON CLOUD.

THEORY BLOCK DIAGRAM

THIS BLOCK DIAGRAM IS SHOWING THEORITICAL COMPUTATION OF WHAT ARE WE BASICALLY DOING IN THIS PROJECT.

SO, HERE WE ARE BASICALLY MONITORING THE WEATHER CONDITIONS AND COLLECTING DATA FROM OPEN WEATHER API.

THE REAL TIME FIELD CONDITIONS ARE MONITORED VIA SENSOR AND THE DATA IS COLLECTED VIA SENSOR.

AND ACCORDINGLY THE MOTOR IS CONTROLLED BY ON/OFF BUTTONS.

ALL THESE DATAS ARE SEND TO THE WEB USER INTERFACE AND THE MOTOR IS CONTROLLED ACCORDINGLY.

NODE-RED ON COMMAND PROMPT

-----

Your flow credentials file is encrypted using a system-generated key.

If the system-generated key is lost for any reason, your credentials
file will not be recoverable, you will have to delete it and re-enter
your credentials.

You should set your own key using the 'credentialSecret' option in
your settings file. Mode-RED will then re-encrypt your credentials
file using your chosen key the next time you deploy a change.

PROJECT SCHEDULE

WEEK 1	WEEK 2	WEEK 3	WEEK 4
planned my project	created device in IBM cloud	started working with node-red	started to prepare reports on zoho writer
set up the development environment	installed node red locally	configured IBM iot sensor and node-red UI	pushed my files to github repository
created accounts in IBM cloud	installed the required nodes	downloaded python idle and ran the code	recorded the feedback video
